Projects

Aura 3D Store | GitHub

Sep 2026

- Interactive 3D Product Viewport: Enables users to inspect products in real time using interactive 360° Three.js WebGL models, exploded engineering views, lighting controls, and colorway customization.
- Full E-Commerce Experience: Features an interactive product catalog with search, category filtering, slide-out cart drawer, wish-list manager, simulated checkout modal, and user authentication.
- Flash Drops & Deals: Includes live promotional countdown timers, discount badges, special markdown showcases, and dynamic toast notifications.

Smart Classroom AI Dashboard | GitHub

May 2026

- Developed a real-time AI-powered classroom monitoring system using computer vision to detect student occupancy, analyze classroom zones, and dynamically control fans and lights based on the number of students, reducing unnecessary energy consumption.
- Python, YOLOv8, OpenCV, Flask, Flask-Socket IO, SQLite, HTML5, CSS, JavaScript, and Chart.
- Can be expanded with IoT-based hardware integration, predictive energy optimization, facial recognition/attendance, multiclass room monitoring, cloud analytics, and AI-driven insights for institutional resource management.
- Tech:** Python, Scikit-learn, Pandas, React, Vite, Tailwind CSS, REST API, Vercel.

Energy Efficient Energy Scheduling Dashboard | GitHub

Apr 2026

- Developed a full-stack CPU scheduling simulator using React and Flask, implementing Round Robin and DVFS-based Energy-Efficient scheduling algorithms.
- Built an interactive dashboard with Gantt charts and real-time visualizations for CPU utilization, energy consumption, Turnaround Time, and Waiting Time.
- Designed a REST API backend to process scheduling simulations and enable dynamic algorithm comparison through the web interface.
- Tech:** Python, JavaScript, HTML, CSS

Edu-Ninja | GitHub

Sep 2025

- Build an innovative educational platform designed to enhance learning experiences for middle-school students through interactive quizzes and educational games, promoting effective and engaging learning.
- HTML, CSS, JavaScript, React.js, and Node.js. were used in the building of this project.
- Can be expanded with personalized learning paths, AI-based recommendations, progress tracking, and interactive assessments to create a comprehensive digital learning platform.
- Tech:** Python, Scikit-learn, Pandas, React, Vite, Tailwind CSS, REST API, Vercel

Training

Data Structures and Algorithms – Lovely Professional University

Jul 2025

- Achieved Grade: A+ (Excellent).

?

- Complete Data Structures and Algorithm course by IamNeo
- Complete C++ Programming course by IamNeo
- Complete Programming in JAVA course by IamNeo
- Mastering Linux by Shiksha
- Complete Python course by Udemy
- Effective Time Management by Master Union

Achievements

Runner-up in a Hackathon – IIT Ropar

Aug 2024

Competed against participants from universities across India.

Innov8x Certificate of Participation – 18-Hour Hackathon

Oct 2024

Participated in an 18-Hour hackathon – Lovely Professional University

Tech Workshop Coordinator – Burn Hall School

Sep 2023

Organized and coordinated a tech workshop with participation from 20 schools across Kashmir.

Skills

Languages: Python, C++, Java, JavaScript, SQL, Kotlin, HTML, CSS

Frameworks: TensorFlow, Next.js, Scikit-learn, Flask, Django, NodeJS, React,

Domain Skills: CNN, RNN, SLAM, Computer Vision, NLP,

Databases: MySQL, PostgreSQL, Jira

Soft Skills: Leadership, Problem-Solving, Teamwork, Public Speaking, Time Management

Education

Lovely Professional University
Bachelor of Technology - Computer Science and Engineering
India

Burn Hall Hr. Sec. School
Intermediate, Percentage: 90%

Since Aug 2024
Punjab,

Srinagar, J&K
